BOTANIC GARDEN OF ŠIAULIAI UNIVERSITY

HISTORY. Botanic garden of Šiauliai University was founded in 1997, instead of Agrobiological Station. It is a member of Botanic Gardens Conservation International (BGCI) and Planta Europa Network for European plant conservation since 2003. Currently the Botanic garden occupies 6.54 ha of the city territory. Director – prof. dr. *Asta Klimienė*.

ŠIAULIAI AREA. Šiauliai is located in Northern part of Lithuania. It is the fourth largest city in Lithuania. The population is about 105653 people.

APPROACHES OF SCIENTIFIC RESEARCH:

- Research of biodiversity regularities *in situ* and *ex situ*.
- Introduction and acclimatization of ornamental plants.
- Education activities in Botanic garden.

SECTIONS OF BOTANIC GARDEN. In 2013, a number of taxa of plants outnumbered over 4190. These plants are stored in 7 sections:

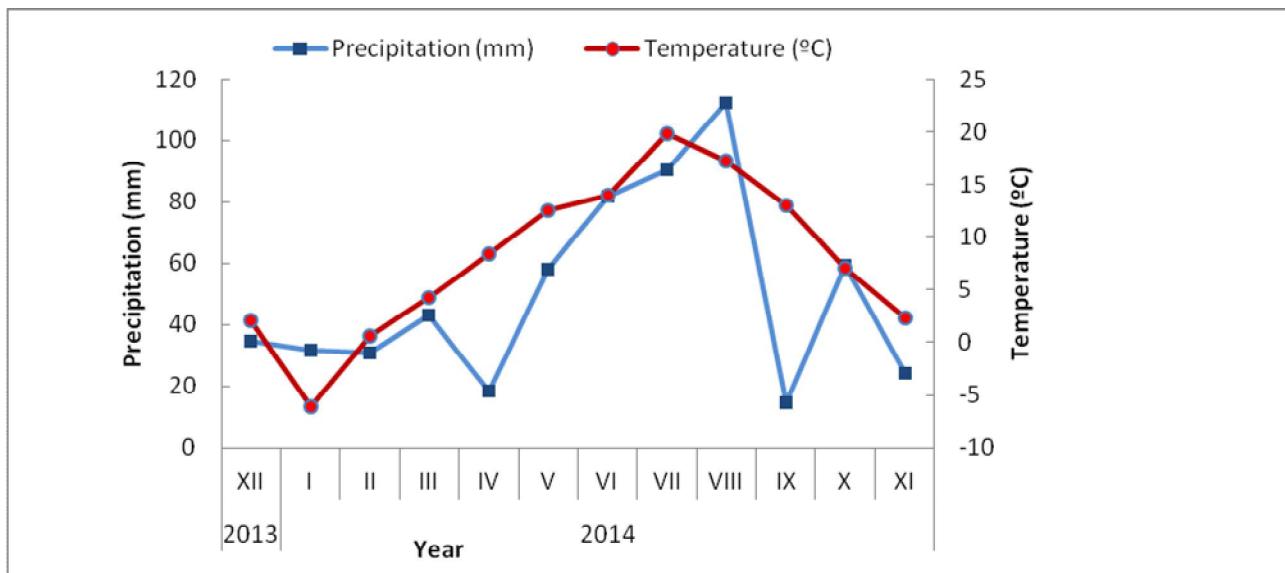

- **Section of Plant Systematics and Geography.** Species of plants are treated by A. L. Tachtadjan system. The section establishment began in 2000 and now section contains about 905 species of 93 families. Responsible for the section, research worker – *Roberta Dubosaitytė-Lepeškevičė*.
- **Section of Lithuanian flora.** Section was started to establish in 2011. Priorities: species from local north Lithuania flora, rare Lithuanian Red books and protected species, medical and ethnobotany plants resources, in small area exhibited weed. Section contain totally about 180 taxa of 58 families plants. Seeds of monocotyledons got from Lithuanian Research Centre for Agriculture and Forestry. Responsible for the section – *Virginija Aleknienė*.
- **Section of Ericaceae Family Plants.** The Ericaceae family plants were started to compile in 2001. Now in this section grows over 300 taxa and cultivars, such as *Rhododendron*, *Calluna*, *Kalmia*, *Gaultheria*, *Erica*, *Vaccinium*. Responsible for the section – *Vaidas Juknevičius*.
- **Section of Floriculture.** Much attention is paid for species and breeds of decorative perennial herbs, also plants of the genus orris, day lily and lily. Number of taxa in section – 1200. Responsible for the section, specialist of floriculture – *Indrė Šakytė*.
- **Section of Mountain Plants.** This section contains mountains plants from all over the world (Alps, Pyrenees, Caucasus, Altai, Hymalaya, Rocky Mountains, and New Zealand) and arctic zones. Today section contains plants of over 987 species and cultivars of 70 families. In this section plants are selected by considering such criteria as decorativeness of plants, geographical plurality and distribution. Responsible for the section, research worker – *Rimanta Vainorienė*.
- **Section of Dendrology.** Now there is about 600 species and cultivars of dwarf coniferous and leafy trees. Responsible for the section, specialist of dendrology – *Vaidas Juknevičius*.
- **Phenological Garden.** The International Phenological Garden – unique network in Europe for the observation of plants. In all gardens generally identical trees and shrubs are planted in order to make large-scale comparisons among the timing of different development stages of plants. Mainly, the rise in air temperature in the previous decades and the clear phenological response by plants led to this increased interest in phenological data. Responsible for the section, research worker – *Rimanta Vainorienė*.

GEOGRAPHICAL SITUATION:
